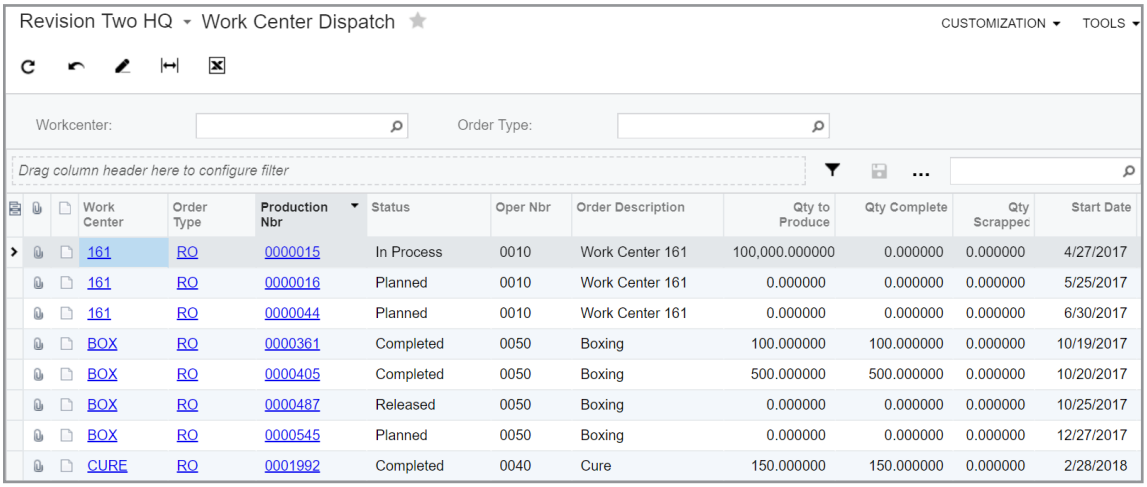
Utilization and Capacity

Lean manufacturing does not emphasize utilization – it is better to have idle equipment than to overproduce or build ahead of the need. That said, there is real value in planning optimum utilization of available resources. Resource load balancing can also generate lower costs and improve on-time completions, reduce overtime and expediting, and improve delivery promise reliability by eliminating uncertainty in planning schedules. The basic Work Center Dispatch KPI, which can be easily customized to better fit your needs, shows workload details for each work center including planned, in-process and optionally completed work so you will always know what each center is working on and what's 'in queue' for completion.



Work Center	Order Type	Production Nbr	Status	Oper Nbr	Order Description	Qty to Produce	Qty Complete	Qty Scrapped	Start Date
161	RO	0000015	In Process	0010	Work Center 161	100,000.000000	0.000000	0.000000	4/27/2017
161	RO	0000016	Planned	0010	Work Center 161	0.000000	0.000000	0.000000	5/25/2017
161	RO	0000044	Planned	0010	Work Center 161	0.000000	0.000000	0.000000	6/30/2017
BOX	RO	0000361	Completed	0050	Boxing	100.000000	100.000000	0.000000	10/19/2017

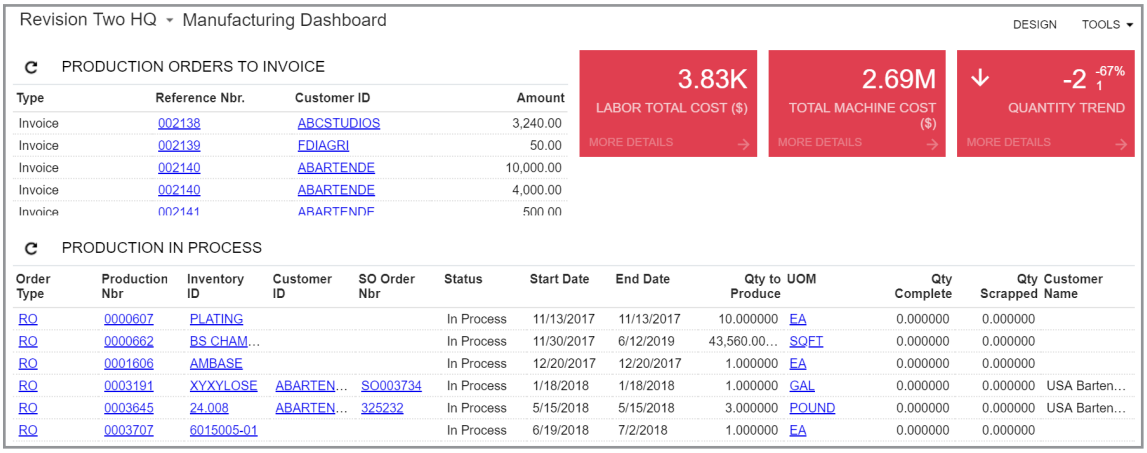
BOX	RO	0000487	Released	0050	Boxing	0.000000	0.000000	0.000000	10/25/2017
BOX	RO	0000545	Planned	0050	Boxing	0.000000	0.000000	0.000000	12/27/2017
CURE	RO	0001992	Completed	0040	Cure	150.000000	150.000000	0.000000	2/28/2018

Scheduled Production

At a more granular level, monitoring production schedules offers better insight into work flow and resource utilization. The Manufacturing Dashboard shown here is the starting point for defining a display of released orders in the plant and the current location and status of each. Summaries in this KPI and the Work Center Dispatch dashboard above provide overall status of work center loads and schedule status across the department or the entire plant.



Type	Reference Nbr.	Customer ID	Amount
Invoice	002138	ABCSTUDIOS	3,240.00
Invoice	002139	FDIAGRI	50.00
Invoice	002140	ABARTENDE	10,000.00
Invoice	002140	ABARTENDE	4,000.00
Invoice	002141	ABARTENDE	500.00

Another interesting KPI that many companies have not yet discovered is to look at profitability by customer by category by item. It may be hard to admit, but we all know, deep down, that not all customers are created equal. Some can be highly profitable while others might actually cost more than the revenue they generate. The same is true for products (items).

Sales Profitability by Item Class and Item

	Item Class [CONSUMER -100-BABY]		**1,601,520.89**	**910,426.34**	**691,094.55**	**43.15**

Mature producers are well-advised to periodically review the relative profitability of both customers and products as they formulate sales and distribution plans and budgets to optimize overall business plans and strategies. This example of Sales and Profitability by Item Class and Item illustrates the power of KPIs to sort and summarize masses of data to provide insights you can use to better understand your business.

Getting started with KPIs

Your Executive Information System will come with a selection of pre-defined KPIs 'right out of the box', as they say, and that's not a bad place to start. But consider these pre-defined KPIs to be training wheels that are helpful in letting you find your balance but are not intended for long-term use. Familiarize yourself with how those KPIs work, how to manage the alerts and warnings, and how to change them to make them more relevant and more useful in your business.

Define a small number of high-impact KPIs (for an individual user)—no more than 8 or 10—aimed at the critical factors for that department or project.

As soon as you are comfortable, start to identify new KPIs that focus on the major functions of your business. The goal is to replace the training wheels with high-performance tires that are just right for you – whether they are racing slicks, mud and snow tires, those nubby mountain bike tires, or efficient highway cruisers.

Many companies getting started with KPIs will become excited by the new insights and visibility and keep defining new ways to look at the business. That is a good thing, of course, but often leads to a proliferation of KPIs that can quickly become counterproductive… again, too much of a good thing. Best practice is to have a relatively small number of high-impact KPIs (for an individual user) – no more than 8 or 10 – aimed at the critical factors for that business, department, project, or area of responsibility. A flexible Business Intelligence system will support drill-down for easy analysis and the easy creation of new ad-hoc measurements for those times when an unusual situation or new idea mandate a different view.

KPI development and use must be done with the involvement and cooperation of the ultimate users of the KPIs – never a secret project that presents the finished product to the unprepared users as a done deal. The users must understand the system and the measurements and tailor them to their specific needs. This is the only way to build a personal connection – ownership – in the KPIs that is required for them to be truly effective.

Make sure that the KPIs are more than just window dressing. They must drive decisions and actions. If they are believed, trusted, and relevant, appropriate decisions and actions will follow. Be sure that incentives line up with measurements; people respond to the way they are measured only when incentives are properly aligned.

Systematizing the KPI process

Use your initial experience to refine and expand your KPIs. In fact, regular KPI 'maintenance' should be a part of your overall management strategy. Your business continually changes. Certainly, customer preferences and markets change. The advance of technology is having an impact on every business, and static measurement systems inevitably become less relevant and useful if not maintained.

The good news is that, today's KPI dashboards are truly flexible, adaptable, and user-driven. There's no need to draw up a detailed description of the changes and beg IT to recode the reports. User-friendly tools make changes and new reports simple and easy, putting the user firmly in the driver's seat. Acumatica Manufacturing ERP is cloud-based so the information is readily available on any device, at any time, from anywhere. And Acumatica's cloud-based applications are built for real-time updates and a high level of flexibility so your KPIs remain dynamic and responsive in every sense of the word.

Based on a broad system like Acumatica Manufacturing ERP, linked to other data sources such as your plant-floor Manufacturing Execution System, along with outside resources like demographics, or economic trends, your KPI dashboard is the control tower for your business. You gather data from current sales activity and forecasts, procurement and production, and outside factors to build a dynamic and valuable view of every aspect of your business; then maintain that view to focus on the most important factors for your continued success. Acumatica makes it easy to collect, distribute and communicate that intelligence and information.

Conclusion / Recap

KPIs may have originated in large, complex organizations but their value us universally recognized, and technology has made powerful, flexible measurement systems with KPI capability both affordable and user-driven so smaller organizations can benefit as well.

Man historical KPIs are historical in nature, focused on summarization, presentation, and analysis of data commonly found in manufacturing management systems. User-managed alerts and alarms highlight activities and business areas that need attention, relieving busy managers from the need to pore over endless reports and screens. Built-in tools enable fast, intensive analysis to get to the heart of the problem and make sound, informed decisions.

KPIs are great for uncovering conditions or actions that adversely affect operations (problems) so they can be addressed quickly before losses pile up. KPIs are also good for identifying things that are doing particularly well and exceeding expectations, so that management can find out what is behind the improvement and how to replicate it throughout the organization.

Predictive KPIs take it all a step further by using current patterns and external information to project operational results like revenue, profit, margin, workload/backlog, etc. in the future. Using these projections, management can be proactive in adjusting operations to produce better results and avoid undesirable outcomes.

Keep in mind that KPIs can and should routinely change. For example, when a company has critical issues in one area, it can create appropriate KPIs to monitor the situation and track the effectiveness of the remedial actions. Once the situation has been corrected and stabilized, the KPI becomes less important and should be modified or replaced to track the next critical management issue. Note that this is an important procedure for limiting the growth of KPIs to the point where the forest obscures your view of the trees. Remember that the ideal number of KPIs to watch on a regular basis (daily?) is no more than 8 to 10.

KPIs are a standard business management tool that is becoming both more powerful and at the same time easier to use thanks to packaged Business Intelligence and Executive Information Systems applications that are part of a comprehensive back office software system like Acumatica Manufacturing ERP.
